Emily’s Creative Brief

Travel Frog Wikipedia Microsite

1. Project Overview

Create a responsive microsite about *Travel Frog (Tabikaeru)*, a 2017 Japanese mobile game developed by Hit-Point. The website will introduce the game, explain its gameplay, and explore its development and popularity in China.

2. Purpose & Audience

The goal is to introduce *Travel Frog* to people who may not be familiar with the game. The site is intended for students, young adults, and people interested in cozy games and illustration. It should be informative, easy to navigate, and visually engaging.

3. Tone & Message

The website should feel warm, nostalgic, peaceful, and playful. It should reflect the game's themes of travel, patience, and unexpected discoveries while creating a relaxing experience for visitors.

4. Visual Direction

The design will build upon *Travel Frog's* existing visual language rather than completely redesigning it. Inspired by the game's illustrations and earthy colors, the website will resemble a travel journal with postcards, stamps, clovers, and souvenirs. Typography should be friendly and easy to read, with subtle animations that complement the illustrations.

5. Content & Navigation

The microsite will include six pages:

1. **Home:** Introduction to *Travel Frog.*
2. **Life with the Frog:** Gameplay, clovers, and travel preparations.
3. **Postcard from the Journey:** Trips, photographs, and souvenirs.
4. **Behind the Game:** Development and inspiration.
5. **A Frog Goes Viral:** Popularity in China
6. **Sources:** References and image credits.

Navigation should be simple and consistent. Postcards or travel-related objects may be used as interactive elements.

6. Interaction & Design Considerations

The website should work on both desktop and mobile. Subtle animations, such as postcards flipping or appearing, can make the experience more engaging without distracting from the content. The design should maintain readable typography, clear navigation, and a consistent visual style.
