Emily’s Content Outline

Project Title: Travel Frog
Wikipedia article: https://en.wikipedia.org/wiki/Travel_Frog

I plan to build a responsive, multi-page microsite about Travel Frog, a Japanese mobile game developed by Hit-Point. Rather than following the Wikipedia article’s order exactly, the site will first introduce the game, then explain everyday gameplay and the frog’s travels, before covering its development and popularity in China. Navigation will allow visitors to explore each section separately. The content will be concise, supported by game imagery where appropriate.

1. Home / Introduction: Introduce Travel Frog (Tabikaeru), its 2017 release, developer, platforms, and the basic premise of caring for a traveling frog.

2. Life with the Frog: Explain the player’s role in preparing food and equipment, collecting clovers, using the shop, and observing the frog at home.

3. Postcards from the Journey: Describe the frog’s independent trips, periods of waiting, and the photographs and souvenirs it brings home. Explain how players discover journeys through these mementos.

4. Behind the Game: Cover the game’s development by Hit-Point, its relationship to Neko Atsume, the meaning of its Japanese title, and design choices that encourage sharing and imagination.

5. A Frog Goes Viral: Discuss the game’s popularity in China in early 2018, its success despite initially being available in Japanese, and the announcement of an official Chinese version.

6. Sources / Credits: List the Travel Frog Wikipedia article, any additional research sources used, and credits for game screenshots, illustrations, or other images.
